## Radio Group Sets Course

Tri-State Amateur Radio Society will teach radio theory and Morse Code to anyone interested, of high school age and older.

Classes will start April 16, at 7:30 p.m., in Civil Defense Headquarters, 2010 W. Ohio St. There'll be a series of lectures and demonstrations, leading to the examinations for novice and conditional licenses. Everyone passing the course will receive a license to operate an amateur radio transmitting station.

Fay Gehres, director and past president of T. A. R. S., will be instructor. Only 40 can be accepted in the class. Applications should be sent on a post card to TARS, Box 51, Evansville. Give your name, address and phone number. For further information, write that address, or contact any member of the organization.

The number of classes held depends on how long it takes the students to absorb the information.

Gehres holds an advanced class amateur radio license and a first class commercial radiotelephone license. He's been a "ham" for 35 years. He was an engineer for radio stations in Indianapolis, Louisville and Hopkinsville, and chief engineer for WGBF in Evansville for 15 years. He now is distribution engineer for Southern Indiana Gas and Electric Co.
